WHY LISTENTALK?

SIMPLE & FLEXIBLE

ListenTALK is simple: Groups can be configured with the push of a button in the docking station tray or on the go with Near Field Communication (NFC) technology.

ListenTALK is flexible: Leaders can easily designate one of three participant modes to meet the needs of any venue or setting.

SECURE

It goes without saying that security matters, so each ListenTALK is equipped with proprietary encryption technology to ensure privacy.

RELIABLE

We're serious when we say ListenTALK stands out from the crowd. It uses a unique 1.9 GHz frequency instead of the overcrowded 2.4 GHz frequency to improve reliability and reduce interference.

SAY HELLO TO LISTENTALK

ListenTALK from Listen Technologies

ListenTALK is a mobile device that both transmits and receives audio, making it the ideal solution for all two way communication needs. Leaders can clearly speak to group participants and allow them to respond with the simple press of a button.

Presenters, leaders, and guides need to communicate clearly without having to shout or whisper. Fielding questions, comments, and collaboration can be difficult in challenging environments. ListenTALK is designed to overcome these challenges and enrich group communication in a variety of applications.

Everything you need to communicate in one device

ListenTALK is a smart two-way communication system existing within a single device. ListenTALK is more than a transceiver, it's an all-in-one device that facilitates communication and collaboration among two or more people in any setting.

A simple, intuitive solution for mobile collaboration

ListenTALK was designed with flexibility in mind and is easily configured with three participation modes.

SYSTEM CONFIGURATION

A ListenTALK system can be easily configured to meet the needs of any setting — small or large, quiet or noisy. Multiple pre-configured systems are available at www.listentech.com/assistive-listening/listentalk, or build your own system to fit your needs.
